Field of the Invention The present invention relates to a vacuum circuit breaker, and more specifically, to a vacuum circuit breaker with an improved structure for preventing gas leakage through an arc tube. 2. Description of the Related Art A vacuum circuit breaker is an electrical switching device that separates an electrical circuit from a source of electric energy when an abnormality occurs in the circuit, so as to prevent electrical damage and prevent loss of life. Vacuum circuit breakers are widely applied to all kinds of industrial sites, and are thus a necessity. Please refer to FIGS. 1 and 2. FIG. 1 is a schematic diagram of a vacuum circuit breaker 10 according to the prior art. FIG. 2 is a schematic diagram of an arc tube 20 of the vacuum circuit breaker 10 shown in FIG. 1. As shown in FIG. 1, the vacuum circuit breaker 10 includes an arc tube 11, a front cover 12, a conductive housing 13 and a contact rod 14. The contact rod 14 is used to generate an electric arc 15 when the vacuum circuit breaker 10 is closed. The front cover 12 is disposed in the conductive housing 13 and the arc tube 11 is disposed in the front cover 12, so that an insulating tube 16 can be fixed between the conductive housing 13 and the front cover 12. An output end 16a of the insulating tube 16 is connected to the conductive housing 13
