The BeoBasis library contains a set of utility Java classes for developers to use on their applications, including the creation of custom windows. Jamboree Report BeoBasis Features: 1. BeoLookAndFeel 2. BeaTable 3. BeoZipping 4. BeoExport

**BeoLookAndFeel:** BeoBasis implements the standard look and feel interface classes for developers to use on their applications, including the creation of custom windows.

**BeaTable:** BeaTable is a class that is similar to the Table class in Swing and therefore acts as a container of rows and columns, allowing you to sort and filter your data.

**BeoZipping:** BeoBasis includes classes that will help you zip your files or folders, save your data or just create archives.

**BeoExport:** BeoBasis provides a set of general utility classes that will help you export your data or make use of the standard Java libraries for file save or printing.

The documentation for the app is a little bit confusing in some areas, but it is really not difficult to use. In the license section, the developer notes that the application is under Apache license 2.0, meaning you are free to use it as long as you refer to it in your source code. Furthermore, the BeoBasis web site says you can run it on Mac OS X, Linux, and Windows. As for the Mac OS X version, it is

---

under GNU GPL 3.0. For the other OS, it is still unclear. As I have already mentioned, the app is free and comes with a set of classes that can be used as a foundation for your software development, not to mention the bonus bundle you get with the purchase of the app. Conclusion BeoBasis is a small and very useful set of Java classes for developers to use on their software development and programming work. If you are looking for a tool that will allow you to make your own functional window or application, this app can be a very good option. components for programmers that allow you to manage the graphical user interface (GUI) components, including, like buttons, scroll bars, for example. Generally speaking, these components are independent of the windowing system for specific operating systems. In addition, they can use a different look and feel and provide both additional functionalities and added components to AWT-replacement components. Among the components that you can find within the app, you can count BeoDesktop, which refer to Java Swing classes that follow the recommended practices of java on Mac. As you would expect, you can take advantage of the general utilities via BeoCommon and export routines for data with BeoExport. The utility also packs three types of classes, namely BeoLookAndFeel, which refer to classes that control the look and feel of Java Swing, BeaTable that provide a sortable grid table and BeoZipping that includes zip routines.

Altered p53 expression and HSP70 and HSP27 heat shock protein expression in an ovarian cancer cell line (SKOV-3) during treatment with an antisense oligodeoxynucleotide (AS-ODN) against the p53-binding protein, p53BP2. An antisense oligodeoxynucleotide (AS-ODN) directed against p53BP2 was used to investigate the role of p53BP2 in p53 function. A continuous cell line (SKOV-3) was treated with the AS-ODN; p53BP2 expression was decreased by 40%,

---

p53 expression was reduced by 77%, and p53 phosphorylation was decreased by approximately 80%. The AS-ODN increased sensitivity to heat and to cisplatin by 3.5- and 1.4-fold, respectively. In addition, immunohistochemical staining of the treated and untreated cells was performed. Heat-induced p53BP2 expression and HSP70 and HSP27 heat shock protein expression were all increased in treated cells. Treatment with AS-ODN to p53BP2 expression and p53 expression may be useful in the treatment of ovarian cancer.Q: 77a5ca646e
