contained Java application* *Compatible with Windows 98 and

Mentat is a unique visual tool for data analysis and knowledge creation. The program's structure and basic functionalities are similar to the well-known applications, as Microsoft Excel or Powerpoint. But the flexibility of this software allows you to create a wide variety of reports from the acquired data. You can create any type of reports and charts. You can also import excel, xml, csv, html files and other sources into the created database and create your own reports and charts by using the data contained in the files. You can export the reports and charts created in Mentat as pdf, jpeg and various image formats. Description: Check if you can't find a way to automatically detect and quickly display the web pages that you might want to visit. eWebProject is an easy to use web browser designed specifically to

help you view all the web pages that you can't always reach with your default browser. You can access the web pages with just a few clicks of your mouse! eWebProject also lets you insert EXIF (exif) data into each web page and display images in thumbnails so you can easily view the properties of each image. Description: Check if your PC gets an incomplete list of security updates. MacUpdate will check your computer and tell you if it needs any of the following updates: Microsoft's Internet Explorer, MacOS, Adobe Flash, Java, Adobe Acrobat Reader and other security updates. MacUpdate has a built-in database that keeps track of the security updates that your computer needs, as well as the date that they were released. So you'll know exactly what security updates you need, and when they were released, so you can easily install them all at once. You can also install security updates directly from the MacUpdate website, so it won't bother you with the updates that are already installed on your computer. Description: DataWallet is a

clever software designed to simplify and speed up everyday tasks such as transferring money from your bank account to your PayPal account, and vice versa. The application will track the transactions that you make with it, so you can easily pay bills, send or receive money, and transfer money from one account to another. DataWallet is also a good replacement for Paypal. Description: Helpfulwallet is a personal information manager designed to help you organize your life and share relevant information with your family, friends and colleagues. With Helpfulwallet, you can view and organize all the things that matter to you: family, friends, work, hobbies, home, finances, and your health. You can share information with others via email, online or phone, and track incoming messages. In addition, Helpfulwallet integrates with Outlook and Google Calendar, so you can manage your appointments and events right from your program. Description: Easylife ERG is designed to help you track your trips, holidays, flights,

purchases, meetings
