This study investigates the effect of oral administration of plant extracts and/or minerals on the level of arsenic (As) in blood, liver and kidney tissues and kidney injury biomarkers in rats with sodium arsenite (NaAsO2)-induced renal toxicity. This study also investigates the effect of oral administration of plant extracts and/or minerals on the activity of the following enzymes: alkaline phosphatase (ALP), gamma-glutamyl transpeptidase (GGT), lactate dehydrogenase (LDH), glutamate pyruvate transaminase (GPT) and malondialdehyde (MDA) in the kidney and liver tissues and in the plasma of rats with NaAsO2-induced renal toxicity.
