What's New in the AutoCAD?

Markup Import Create your own icons from a large set of existing shapes, or import a new icon set from a PDF, share it with others, and work with it as a team. Get Started Quickly and Easily Draw shapes and save them to the cloud in one step. Add data to your new shapes using the standard AutoCAD units. Export shapes as a PDF and import them into a variety of products (email, Excel, Word, and more). Graphics Lab Enhance your graphics with a variety of options, including support for importing and exporting to other formats, 3D meshes, and VR/AR. Smart Drawing Use the right tool for the right job, without wasting time waiting for tools to load. AutoCAD responds to your actions and environment, so you can be more productive with less effort. "There's nothing I like better than being introduced to an idea I never knew existed." — Bill Gates "I have not failed. I've just found 10,000 ways that won't work." — Thomas A. Edison Wrap-up So, what's new in AutoCAD 2023? Enhanced AutoCAD's multi-shape toolset with the addition of LOB and LINE. Access and analyze the LOB data in your drawing. You can find the shape IDs of the LOB data, see the entire LOB database, and generate a tree of the LOB hierarchy. LOB Data in your drawings, for increased efficiency and productivity. You can also filter and narrow down the LOB database by color, position, size, or material type. Include line data in your drawing to increase drawing accuracy and efficiency. Add line data to shapes, text objects, and annotations. You can then connect the line segments to the original lines in the drawing, while filtering out line segments that don't belong. Work with LOB data for increased efficiency and productivity. Automatically create a more accurate model by keeping the shapes that are closest to each other close to each other. Even better, and faster, with support for NURBS. New geometric primitive in 2D: NURBS (Non-Uniform Rational B-Splines).
